Summary

AI & Data Science undergraduate (CGPA 9.05/10) with hands-on experience in **Python, SQL, Machine Learning, Generative AI, REST APIs, and AI application development**. Building an MCP-based AI coding assistant using retrieval and tool-based workflows, with additional experience developing FastAPI services and ML models. First author of a published paper on conditional GANs.

Education

Ramrao Adik Institute of Technology, D. Y. Patil Deemed to be University **August 2023 – June 2027**
B.Tech in Artificial Intelligence & Data Science, CGPA: 9.05/10 *Navi Mumbai, India*

Experience

Bluestock Fintech **Sept 2025 – Oct 2025**
SDE Intern *Mumbai, India*

- Developed backend and data-driven features using **Python** and **Django**; designed the **PostgreSQL** schema and wrote automated data-processing scripts for a fintech platform.
- Implemented and tested **REST APIs** for backend functionality, applying Git-based development and secure coding practices.

Projects

MCP DevMate AI | *Python, MCP SDK, FastAPI, FAISS/Chroma* | GitHub **Oct 2026 – Present**

- Building an AI coding assistant for Python repositories using **hybrid keyword and embedding retrieval** over AST-parsed code chunks, with file/line-level citations and tools exposed through a local **MCP server**.
- Designing a benchmark to evaluate retrieval quality using **Recall@k, MRR, and NDCG**, along with tool-selection, answer-correctness, and citation-accuracy metrics for AI-assisted workflows.

JobHunt | *Python, FastAPI, SQLAlchemy, SQLite, Pytest* | GitHub **Oct 2026 – Nov 2026**

- Built and actively use a working job-search assistant that pulls postings from Greenhouse, Lever and Ashby across 31 company boards, scores them against my skills and emails me the best matches, which I use for my own applications.
- Designed a skill extraction engine using a dictionary of aliases and regex patterns that separates required from nice-to-have skills and scores each posting against my profile, with required skills weighted higher.
- Chose deterministic matching over an LLM so scores stay explainable and free to run; stored matched and missing skills per job so postings can be rescored when the profile changes.
- Screened 1,209 postings down to 20 candidates in one live run using regex and YAML filters; validated with 86 passing Pytest tests.

Behavior-Based Alternative Credit Scoring | *Python, XGBoost, LightGBM, TensorFlow, SHAP* | GitHub **Sept 2026**

- Built a stacked ensemble using XGBoost, CatBoost, LightGBM, ANN, and logistic-regression meta-learning on 1.35M Lending Club records, achieving 0.7235 ROC-AUC and 0.9072 PR-AUC using behavioral signals.
- Tuned three gradient-boosting models using **Optuna** and applied SHAP-based feature selection, reducing features from 65 to 45 with no AUC loss and approximately 30% faster training.
- Conducted a 9-experiment ablation study covering WOE binning, stacking, leakage-free SMOTE, and TabNet to evaluate model and feature contributions.

Emotion Detection Using cGAN | *Python, TensorFlow, Generative AI* | Paper **Aug 2025**

- Trained a conditional GAN on FER-2013 containing 28,709 images and analyzed training stability and generated-image quality; published the work as first author.

Technical Skills

Programming & Data: Python, SQL, JSON, C, JavaScript
Generative AI: LLM Fundamentals, Prompt Engineering, RAG Fundamentals, MCP, AI Assistants, Embeddings
Machine Learning: scikit-learn, XGBoost, LightGBM, CatBoost, TensorFlow, SHAP, Optuna, SMOTE
Backend & APIs: FastAPI, Flask, Django, REST APIs, PostgreSQL
Data Libraries: Pandas, NumPy, OpenCV
Tools: Git, GitHub, Docker

Certifications

Bluestock Fintech – Internship Certificate
Udemy – Deep Reinforcement Learning using Python
EdX – Introduction to Web Development with HTML5, CSS3, and JavaScript; Introduction to SQL; CSS Basics

Leadership

iDEA Hackathon – Presented by Union Bank **March 2025**

Team Leader

- Led a team to build a credit-risk prediction model using alternative financial indicators during a 30-hour coding session; cleared every preliminary round and reached the final round.
